Laboratory Procedures in the Clinical Setting*

Stephen J. McPhee, MD

This chapter presents information on how to perform common bedside laboratory procedures. Information on interpretation of results of body fluid analysis is included in some of the sections. Test results can be used for patient care only if the tests have been performed according to strict federal guidelines.

<i>Contents</i>	<i>Page</i>
1. Obtaining and processing body fluids	18
A. Safety considerations	18
B. Specimen handling.....	18
2. Basic staining methods	19
A. Gram's stain	19
B. Acid-fast (Kinyoun) stain	22
C. Wright's stain of peripheral blood smear	22
D. Methylene blue stain for fecal leukocytes	23
E. Tzanck smear	25
3. Other bedside laboratory procedures.....	26
A. Urinalysis	26
B. Vaginal fluid wet preparation	30
C. Skin or vaginal fluid KOH preparation	31
D. Synovial fluid examination for crystals.....	31
E. Pulse oximetry	32
